CHAPTER 5

ECONOMIC TRENDS

Stillwater Technologies Manufacturing Plant 1040 South Dorset Road

LABOR FORCE PARTICIPATION

The labor force is composed of all individuals 16 years of age and older who are classified as either employed or unemployed. According to the United States Census Bureau's definitions, employed individuals are those "at work" or "with a job but not at work." Unemployed persons are those "looking for work" or "available to accept a job." Table 5-1 shows the labor force participation rates of Troy and other selected areas in 2000. While Troy's unemployment rate (3.3%) was lower than areas such as Piqua (4.3%), it was higher than Tipp City (2.0%) and Miami County (3.1%). It was the same as the Miami Valley Region.

	Total Persons 16+	In Civilian Labor	Percent	Percent in
	Years of Age	Force	Unemployed	Armed Forces
Troy	17,013	11,565	3.3%	0.1%
Miami Valley Region	741,911	481,743	3.3%	0.7%
Miami County	76,287	52,347	3.1%	0.0%
Piqua	15,897	10,641	4.3%	0.0%
Sidney	15,161	10,231	4.1%	0.0%
Tipp City	6,939	4,986	2.0%	0.1%

Table 5-1 Labor Force Participation Rates

Table 5-2 shows the increase in the Troy female labor force between 1980 and 2000, a trend consistent with society in general. Working females had the greatest percentage increase (7.8%) between 1980 and 1990, and the greatest number increase (1,173) between 1990 and 2000. Conversely, there has been a slight decrease in the total number of males in the Troy labor force since 1980, dropping 3.7% between 1980 and 1990, and another 1.9% between 1990 and 2000. From 1980 to 2000, Troy's female labor force increased from 42.8% to 49.5% of the total. In aggregate, the entire labor force increased by 2,597 or 4.4% from 1980 to 2000.

	# of Males	# of Females	Total
2000	5,845	5,720	11,565
1990	5,202	4,547	9,749
1980	5,134	3,834	8,968

% Male	% Female
73.3%	63.0%
75.2%	58.2%
78.9%	50.4%

Table 5-2 Male-Female Ratio of Labor Force

EDUCATIONAL ATTAINMENT

Educational attainment is often used by businesses to assess the type of labor force available in an area. For example, engineering and research establishments tend to

gravitate toward areas with sufficient numbers of persons with higher levels of educational attainment in related areas. Table 5-3 illustrates the educational attainment of persons 25 years or older in Troy and other selected areas. In 2000, Troy had a lower percentage (81.4%) of high school graduates (including GED) than all the areas surveyed except Piqua (74.6%) and Sidney (78.1%).

	Troy	Miami Valley Region	Miami County	Piqua	Sidney	Tipp City
2000 High School Graduates	81.4	83.7	82.7	74.6	78.1	89.4
2000 Bachelor's Degree or Higher	17.1	22.1	16.3	9.9	13.6	23.2
1990 High School Graduates	76.5	77.6	76.6	69.5	70.9	80.0
1990 Bachelor's Degree or Higher	16.9	19.1	14.1	9.0	14.3	13.1
1980 High School Graduates	66.9	69.9	66.9	60.5	N/A	69.6
1980 Bachelor's Degree or Higher	13.1	15.8	15.8	7.4	N/A	10.6
1970 High School Graduates	59.0	56.2	55.5	49.1	N/A	66.3
1970 Bachelor's Degree or Higher	8.8	11.0	6.9	5.5	N/A	9.7

Table 5-3 Educational Attainment Rates

Table 5-3 also shows percentages of college graduates with a bachelor's degree or higher. Similar to high school attainment, Troy (17.1%) had a lower percentage of individuals with at least a bachelor's degree than all jurisdictions except Piqua (9.9%), Sidney (13.6%), and Miami County (16.3%). Despite Troy's lower educational attainment percentages compared to other areas, the City has made significant increases in this area over the last 30 years. In 1970, Troy's percentage of high school graduates was only 59.0%, increasing to 66.9% in 1980, 76.5% in 1990, and 84.1% in 2000. Similarly, those individuals with at least a bachelor's degree increased from 8.8% in 1970, 13.1% in 1980, 16.9% in 1990, and 17.1% in 2000. This gain can be attributed in part to the new residential growth attracted to the community during that time period.

INDUSTRY OF EMPLOYED RESIDENTS

As shown in Table 5-4, manufacturing has been the principle sector for employed residents of Troy, with just over 30% of the total jobs in 2000. In that respect, Troy's labor force is similar to that of Miami County. Education, health, and social services were the next largest group at approximately 19%. The retail trade sector was third at

just over 10%, and the arts, educational, health, and social services sector was fourth at approximately 8% of the total employed.

Troy's distribution of industry is comparable to cities of similar size; i.e., Piqua which relies on manufacturing, retail, and various public and community services as key employers within the community. These cities differ from larger ones such as Dayton and Columbus, which typically have a higher percentage of construction and entertainment/recreational jobs.

Table 5-4 Distribution of Industries

OCCUPATION OF EMPLOYED RESIDENTS

Several factors affect the occupations of a given population. They include the demand for specific disciplines in the overall metropolitan employment market, the need for industries to support the basic manufacturing activities of that overall market, and the community's attractiveness as a place to live. As shown in Table 5-5, management was

the largest occupational category in 2000 with approximately 31% of the employed residents. Production, transportation, and material moving was second with just over 25%, sales and office third with just under 25%, and service fourth at approximately 14%.

Troy's occupational distribution is similar to all of the cities compared except Piqua, which shows lower levels of management occupations and higher levels of production occupations.

Table 5-5 Employment by Occupation

COMMUTING PATTERNS

Table 5-6 indicates the counties where residents of Troy worked, as well as counties Troy workers came from in 2000. Just under two-thirds of Troy's residents worked in Miami County. Of the remainder, almost 14% worked in Montgomery County to the immediate south; the remainder worked in Shelby (2.0%), Greene (1.0%), Clark (1.0%) and other areas (19%). In addition, just under half of the workers in Troy lived in Miami County. Almost 8% came from Miami County, others from Shelby (1.0%), Darke (0.8%), Warren (0.5%), and Greene (0.5%). The balance of workers (42.2%) came from other areas. Both statistics demonstrate the abundance and variety of jobs in Troy and Miami County.

Balance	5,410	42.2%				
Total Workers	12,817	100.0%				

Table 5-6 Counties Where Residents Work and Workers Reside

Table 5-7 shows the job commuting patterns by percentage of Troy residents 16 and over compared to other areas. Troy's average travel time in 2000 (approximately 17 minutes) was the same as Piqua, but less than all of the other jurisdictions. Shorter commute times can be explained by the greater availability of jobs proximate to home, as well as road capacity and design. Almost 90% of Troy's commuters drove alone to work, which is similar to all of the other areas except the Miami Valley Region and Piqua. The decision to drive alone, car-pool, use public transportation, or walk to work depends on a number of physical and demographic factors. In larger, denser urban areas such as Dayton, individuals are more likely to car-pool and use public transportation to save time due to congestion and limited vehicle parking, especially downtown and in surrounding commercial areas. In contrast, the demand for car-pooling and public transportation is less in areas such as Troy and Tipp City, which

	Mean travel time to work %	Drove alone %	Car- pool %	Public Transport %	Walked %	Other %	Worked at Home %
Troy	17.2%	88.0%	7.8%	0.6%	1.6%	1.2%	0.8%
Miami Valley Region	21.0%	84.0%	8.9%	1.8%	2.4%	0.7%	2.3%
Miami County	20.1%	86.4%	8.0%	0.5%	1.6%	0.7%	2.7%
Piqua	17.2%	82.1%	11.0%	1.3%	2.5%	0.9%	2.2%
Sidney	14.3%	86.0%	8.6%	0.0%	2.0%	0.0%	2.3%
Tipp City	21.0%	91.1%	5.1%	0.1%	1.6%	0.8%	1.4%

Table 5-7 Job Commuting Patterns

provide better vehicular access and more parking options. The decision whether or not to drive alone to work is also based on factors such as income and household characteristics, i.e. family size and labor force participation. Physical and demographic factors can also impact the percentage of people who walk compared to those that commute by vehicle. Pedestrian traffic is impacted by common factors such as the availability of jobs proximate to residential areas and income level. It is also influenced by personal beliefs such as concern (or lack thereof) for the environment.

RELATIVE IMPORTANCE OF SELECTED ECONOMIC SECTORS

Table 5-8 shows the importance of the major sectors of the Troy economy which include manufacturing, wholesale trade, retail trade, and selected services (education, health care, the arts, etc). Manufacturing and retail trade were the most significant of the four selected sectors from 1972 to 1992. Wholesale trade and selected service figures were not available for the period 1992 to 1997; however, this chart shows that manufacturing has remained the most dominant part of the local economy.

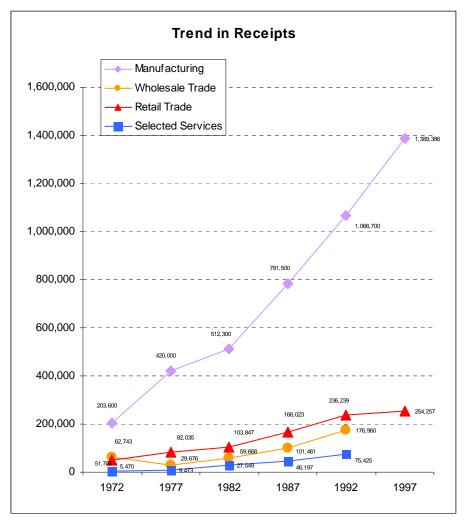

Table 5-8 Major Sectors of Troy's Economy

5 - 7

Table 5-9 shows that Troy's share of the Miami County manufacturing base increased moderately (14%) from 1972 to 1982 and dropped slightly (2%) from 1992 to 1997. The selected services sector increased only slightly (4%) from 1972 to 1992, in contrast, the wholesale sector decreased 15% during the same period. The retail trade sector decreased 2% from 1972 to 1997. Wholesale trade has been less significant in Troy because of the tendency for large wholesalers to locate in more populous counties. That trend, however, may reverse in the future as the Dayton urbanized area spreads northward and additional distribution centers locate near the Dayton International Airport and close to the Interstate Route 70/75 interchange.

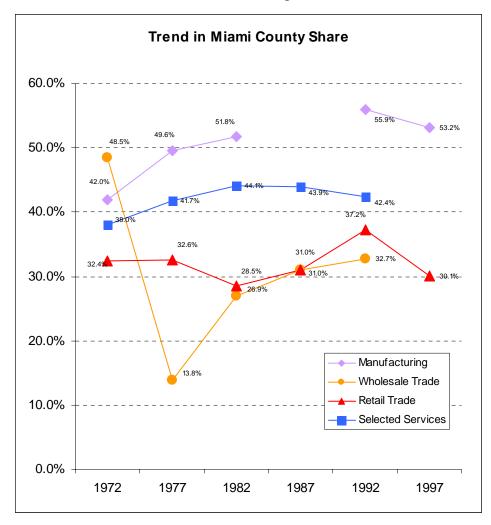

Table 5-9 Troy's Share of the Miami County Economy

HOUSEHOLD INCOME DISTRIBUTION

Income is linked to many other economic factors such as housing, labor force profile, industrial mix, access to employment areas, and ability to attract commercial and service enterprises. As illustrated in Table 5-10, households in Troy with an income

5 - 8

between \$50,000 and \$74,999 were the highest percentage for the City. All of the compared areas also had high percentages in this same range except Piqua and Sidney who were in the \$35,000-\$49,999 range. Compared with other areas, Troy was similar with a trend of a high percentage in the \$50,000-\$74,999 range. The only two other localities that did not follow this trend were Piqua and Sidney who had a high percentage in the \$35,000-\$49,999 household income range.

Table 5-10 Household Income Distribution

HOUSEHOLD INCOME CHANGE

Income change, whether in growth or decline, is a main indicator of a community's economic health. Table 5-11 compares the median household income change from

	1990 Census Median Income	2000 Census Median Income	Percent Change
Troy	\$29,032	\$39,531	36.2%
Miami Valley Region	\$30,472	\$41,550	36.4%
Miami County	\$31,425	\$44,109	40.4%
Piqua	\$25,026	\$35,681	42.6%
Sidney	\$26,943	\$38,663	43.5%
Tipp City	\$30,292	\$48,675	60.7%

Table 5-11 Household Income Change 1990-2000

1989 to 1999 for selected areas. All areas increased their median household income during this time. Tipp City showed both the greatest dollar amount increase (\$18,383) and percentage increase (60.7%). Troy's \$10,499 increase or 36.2% income change were similar to that of the Miami Valley Region. Miami County, Piqua and Sidney all faired slightly better than Troy with higher percentage increases.

HOUSEHOLD EARNINGS BY TYPE

Table 5-12, on the next page, illustrates 1999 household earnings by type. The type and amount of earnings within a jurisdiction is important because it is a strong indication of the strength of the local economy, as well as housing and social service needs. Troy's median earnings were ranked fourth lowest for men and third lowest for women of the 6 areas surveyed. In addition, Troy's mean earnings were lower than all of the areas except Piqua and Sidney. Median retirement income was lower than all but Tipp City and Sidney. Troy's mean Social Security income was greater than all of the areas except Tipp City. However, its mean Supplemental Security Income (SSI) was lower than all of the areas. Similarly, its mean public assistance income was less than all of the areas.
